Supplementary Information

Contrastive Embedding Learning for Large-scale Efficient Cell Tracking

Hongyu Zhou, Seonghoon Kim, Zhifeng Zhao, Jiaqi Fan, Wen Huang, Xinghua Sui, Lizhi Shao, Haoran An, Jing-Ren Zhang, Jiamin Wu, Qionghai Dai

I. Supplementary Figures

Supplementary Figure 1	Detailed network framework of CELLECT
Supplementary Figure 2	Examples of the output confidence map of cell centers obtained by CELLECT
Supplementary Figure 3	Clustering of feature vectors obtained by CELLECT via PCA across the adjacent frames
Supplementary Figure 4	Visualization of the embedding map obtained by CELLECT
Supplementary Figure 5	Illustrations of the intra-frame MLP and inter-frame MLP
Supplementary Figure 6	Illustration of different types of errors during cell tracking used for evaluation
Supplementary Figure 7	Ablation study of CEN module on tracking performance
Supplementary Figure 8	Influence of level configuration during training on tracking performance
Supplementary Figure 9	Influence of patch size on tracking performance
Supplementary Figure 10	Influence of the search-mark structure on tracking performance
Supplementary Figure 11	Influence of imaging frame rate on tracking performance under different candidate selection strategies
Supplementary Figure 12	Influence of imaging frame rate on tracking performance under different training dataset and candidate numbers used
Supplementary Figure 13	Evaluation of the reproducibility of the model
Supplementary Figure 14	Evaluation of the reproducibility of cell linking during different imaging frame rate
Supplementary Figure 15	Cell tracking for dual-color labeled T cells
